

I am against BPL. As a Television Broadcast Engineer with 19 years of service and a ham radio operator, I find BPL to be a constant source of interference on the ham HF bands and Shortwave services. There are many other ways to deliver High Speed Data, including cable (which I have and love), DSL, and 5.8Ghz wireless. I think the power lines should do the job they do, which is deliver 60HZ AC power.
